

Business Glossary Tool: Agree on vocabulary before you start talking about the data

If you want to know measure something, you first need to agree on what that is. Ask different people and you'll probably get different definitions. Define the language of your organization in a business glossary.

Find key data in all your databases easily

Databases can be huge and complex with thousands of tables and many more fields. With a business glossary-data dictionary links it is easy to find all occurrences of key data in all your databases - like "Customer" or "Revenue".

Simplify description of technical metadata

It is easier for technical people to create a technical data dictionary. They can focus on application specific attributes and simply link existing business definitions from the glossary created by the business users.

Help everyone create and read the reports

Established universal definitions of key concepts accelerate articulation of requirements for new reports and analytics, the design of the solution and later understanding of the presented numbers.

Better collaboration between departments, including business-IT

Allow everyone in the organization to speak the same language, break down silos and build collaboration, including on the line between business and IT.

Empower your business to use data

With a business glossary mapped to data dictionary your business can be more self-reliant and from navigate from business-oriented vocabulary to the physical data, otherwise accessible only to the tech-geeks who know the complicated structure of the databases.
