Snowflake + Dataedo = even more value form data

Snowflake is a modern data warehouse built for the cloud. It provides scalability, impeccable performance and support for all your data, including structured and semistructured data. Thanks to that DBAs can focus on high value activities and analyst have a faster access to the data.

Dataedo provides additional layer to Snowflake - metadata management and documentation. It allows you to explain all your tables and columns, document table relationships, visualize the data model, and share everything with your team in convenient, interactive documentation. This makes understanding your databases and querying data easier than ever.

Take a product tour

Profile data and analyze data quality in your Snowflake data warehouse

Use sample data to learn what data is stored in your data assets. Dataedo scans all values in selected tables and calculates useful metrics like rows number, percentage of distinct and empty rows. It also shows minimum and maximum values, average, median, span or deviation. This allows you to peak into values itself and identify areas that require improvements.
