Take a product tour

Profile data and analyze data quality of your AWS data sources

Use sample data to learn what data is stored in your data assets. Dataedo scans all values in selected tables and calculates useful metrics like rows number, percentage of distinct and empty rows. It also shows minimum and maximum values, average, median, span or deviation. This allows you to peak into values itself and identify areas that require improvements.

Take a product tour

Discover and classify sensitive data in your AWS data sources

Dataedo finds fields holding potentially sensitive data automatically from entire data catalog using built in functions. You and your team can curate metadata tags manually.

HumanResources.Employee

Table	Columns	Relations	Unique keys	Triggers	Dependencies	Linked terms	Schema Changes	Metadata
Key	#	Name	Data type	Description	GDPR Classification	GDPR Data Domain	PII	PII Data Domain
	1	BusinessEntityID	int	Primary key for Employee records.
