About

This website uses cookies

We use cookies to personalise content and ads, to provide social media features and to analyse our traffic. We also share information about your use of our site with our social media, advertising and analytics partners who may combine it with other information that you've provided to them or that they've collected from your use of their services.

No shared standards

Without common definitions or data contracts, teams struggle to create consistent and reliable data products.

Dataedo

Unclear dataset statuses

Data consumers can't easily tell which datasets are production-ready and which are experimental or incomplete.

What you get

Dataedo

Reduced duplicate work

Teams reuse existing data products instead of rebuilding the same datasets from scratch.

Data Lineage

Provide transparency into data dependencies and downstream impact, helping teams understand how changes affect analytics and reusable data assets.

What is a data product?

A data product is a curated, reusable dataset designed for consumption by analytics, reporting, or AI teams. It includes clear definitions, ownership, documentation, and quality standards so users can confidently rely on the data.
